## FAQ

### WHAT IS COLLAGEN?

The body's natural collagen starts slowing down from age 25, so it's imperative to feed your skin and protect your innate supply with PEARL. Collagen is a structural property, making up over 75% of our skin and giving it shape. Collagen is also found in our bones, connective tissue, and also makes up around 90% of our ligaments. Collagen acts like a glue within the body – working to strengthen elasticity, as well as aiding the replacement of dead skin cells. Collagen is the essential nutrient that enables skin radiance, healthy hair and strong nails.

### WHY IS WILD CAUGHT MARINE COLLAGEN SUPERIOR?

PEARL marine collagen is the most premium grade available – sourced from wild caught deep sea cod skin in Norway, harvested from the crystal clear waters of the North Atlantic ocean. PEARL offers the purest source of 100% natural collagen peptides on the market. Wild caught marine collagen has been proven to be absorbed 1.5 times more efficiently than collagen from bovine. Further, wild caught marine collagen has a particularly high content of amino acids glycine, proline, and hydroxyproline – the amino acids that stimulate cells in the skin, bones and connective tissues and leads to the production of new collagen.

### WHERE IS PEARL COLLAGEN SOURCED?

PEARL is sourced from wild caught deep sea cod skin in Norway, harvested from the crystal clear waters of the North Atlantic ocean.

### CAN PEARL BE TAKEN WHILST PREGNANT OR BREASTFEEDING?

We recommend speaking with your healthcare professional before consuming any new supplements.

### IS PEARL HEAT STABLE?

Yes it certainly is – our wild caught marine collagen is heat stable up to 150 degrees. We love taking our morning dose of collagen in our matcha latte or coffee.

### IS PEARL VEGAN?

No, our wild caught marine collagen is not vegan as it is sustainably sourced from deep sea cod skin.

### WHAT IS THE SHELF LIFE?

Unopened PEARL is shelf stable for 18 months. Once opened we recommend consuming within 4-6 weeks.

### HOW SHOULD I STORE MY PEARL?

We recommend storing your PEARL in a cool, dark place below 25C.

### WHAT IS THE RECOMMENDED DOSAGE?

Clinical studies reveal that taking 2 servings of PEARL consistently for 4-6 weeks will deliver visible results. We recommend taking 2-3 servings per day for a reduction in fine lines, increased skin hydration, clarity and firmness. Our team recommends taking 1 serving in the morning, and 1-2 servings at night time to ensure maximum absorption overnight.

### HAS PEARL BEEN TESTED FOR QUALITY?

PEARL undergoes strict quality testing to certify all ingredients are the most premium grade of Wild Caught Collagen. Every jar of PEARL is tested for stability, heavy metals and toxins such as mercury. PEARL far exceeds the Australian and EU standards of quality and safety.

### ALLERGENS?

PEARL Marine Collagen Superpowder (Organic Coconut) is not suitable for those with fish or coconut allergies. PEARL Marine Collagen Superpowder (Unflavoured) is not suitable for those with fish allergies.
