

PEARL MARINE COLLAGEN SUPERPOWDER

ORGANIC COCONUT

WILD-CAUGHT NORWEGIAN COLLAGEN:

PEARL's collagen is the most premium grade available, sourced from the skin of deep sea cod, wild caught in the crystal clear waters of Norway. PEARL offers the purest source of 100 per cent natural collagen peptides on the market. Research shows our bodies absorb wild-caught marine collagen around 1.5 times more efficiently than bovine (cattle-derived) collagen, which is commonly used by other brands. Wild-caught marine collagen also has a particularly high concentration of glycine, proline and hydroxyproline, which are amino acids that work to stimulate cells in the skin, bones and connective tissues to produce new collagen.

FRESHWATER PEARL POWDER:

This legendary beauty booster possesses powerful anti-ageing and antioxidant properties, and is one of the richest sources of calcium on the planet — offering over 80 per cent by weight. Our pearl powder, sourced from sustainable freshwater farms, is also rich in zinc, magnesium and essential trace minerals such as selenium and silicon. Pearl powder is proven to help stimulate the body's natural production of collagen, working to strengthen hair, skin and nails.

AUSTRALIAN KAKADU PLUM:

This homegrown native superfood is the richest source of vitamin C in the world. Containing more than five times the antioxidant content of wild blueberries, Kakadu plum is an antioxidant powerhouse that protects the skin from free radical damage and environmental aggressors. Vitamin C is also imperative for maximum collagen absorption, which is precisely why Kakadu plum is a hero ingredient in our Marine Collagen Superpowder.

ORGANIC COCONUT FLESH:

Deliciously creamy, our coconut flesh is sourced from sustainably harvested 100% organic coconuts (not coconut flavouring). Coconut is packed with vitamin C, and is also rich in potassium, iron and selenium.

ACACIA FIBRE:

This natural fibre derived from the sap of the Acacia senegal tree is a prebiotic that stimulates healthy gut flora and promotes optimal digestion.
